

First name:	Surname:	Brief overview of your background and experience in this SIG subject matter: (maximum 150 words)	What motivated you to put yourself forward for election to the APM Risk SIG committee? (maximum 150 words)	What qualities, skills and experience do you think you'll bring to the APM Risk SIG committee? (maximum 150 words)
Robert	Balaam	I have firmly established myself as a leading professional in Risk Management, Schedule Management, Cost Management, and Programme Analysis & Reporting, with extensive knowledge, experience, and insight across many industries & sectors. I have specialised in Risk Management and Risk software over the last 9 years, and transformed and implemented many new innovative risk processes, techniques, and insights. I exhibited my Risk Software, PROMS-MC, at the APM SIG Risk Tools Conference in Newbury on the 26th May, 2011. I am now at the 'cutting edge' of Integrated Cost & Schedule Risk Analysis, and also involved with AI and new technologies.	I have recently successfully applied for Full Membership via the experience route. I have attended and enjoyed many APM events over many years prior to this, and would now like to help to provide similar great experiences and insights to others. I would also like to contribute to furthering APM Risk for all members, risk professionals, and the wider project community.	I have specialised in Risk Management and Risk software over the last 9 years, and transformed and implemented many new innovative risk processes, techniques, and insights for which I hope I can produce articles, presentations, and white papers for members, risk professionals, and the wider project community.. I am at the 'cutting edge' of Integrated Cost & Schedule Risk Analysis, and also involved with AI and new technologies, and would like to work with APM Risk SIG members to review, assess, discuss, develop, and provide guidance on these.
Richard	Bendall-Jones	Risk and value manager and supposed 'thought leader' on data-centric approaches to risk management (not my words).	Because I've done it for 3 years and I like giving back to the PM community.	Thoughtful listener, passionate champion, all-round nice guy.
Christopher	Blockley-Webb	I have been in RM for over 10 years. Have been a Senior RM in several major procurement programmes and am now the Assistant Head of Risk for the MoD.	Being involved in major defence programmes and projects as a Risk / Senior Risk Manager I wanted to join the SIG for two reasons. Primarily to learn	I currently am invited to the Risk Sig and have tried to be pro-active in meetings / seminars etc. I bring over 10 years of experience in risk

		Risk is also my hobby, sitting on BS i RM1 and other sub-committees. I am also a Trainer and facilitate workshops across the MoD. I have been working with the SIG over the past year and am hoping to join as a committee member.	from other professionals outside of my domain, and also to pass on any knowledge that I may have.	management at Project through to Strategic level work. I also am a committee member of BSi RM1, 31000, 31010, 31100 and guide 73 and am looking to bring BSi and APM closer by working on a new Project Risk Management standard.
Estelle	Detrembleur	I feel I have much more to give so 2021/22 here I come! I particularly focussed my experience on planning, risk management and contract management (NEC3 Suite). Having just served 5 years on the committee I'm passionate about supporting the development of professionals and the project management profession. I have been really fortunate to share my knowledge and experience with the committee and work together towards a shared vision to raise awareness of APM. I am an advocate of continuing to progress the risk management field.	I found the SIG very vibrant and supportive and I feel empowered by empowering women in the profession. Knowledge, experience and 'expertise' of working in Risk management in the UK construction/infrastructure sphere and previous experience working with the SIG. My main motivation is to support the risk management community by sharing best practices in the construction industry and beyond. I'm an optimist who loves to take on challenges and deliver them through a cooperative approach. I would like to contribute to technical papers, conferences, webinar to expand risk management as a life skill. Developing proactive, progressive recommendations and advocating these to the committee and community.	I possess excellent communication and team working skills some of which I gained through my career. I am very collaborative in working with others to achieve common goals and sharing ideas. My public relation expertise allowed me to work with high level management on Central and Local government initiatives. From newsletters to implementing complex concepts, I contribute and deliver all projects I am involved with. I recognise the need to inspire people with risk management capabilities as well as driving innovation and creating an environment where career progression is open to all.
Ben	Fry	I have over 15 years' experience in Risk Management, having worked in major Programmes and Projects in both the Defence and Infrastructure domains. During this time, I have undertaken a diverse range of risk management	I am an advocate of continuing to progress the risk management field, having done presentations to various conferences and events. I believe that as a profession we need to continue to focus our attention on how we continue	I have a diverse breadth of experience having done risk management activities in a range of different organisations and sectors. In addition to risk management (which is my primary focus), I also

		<p>activities including Project &amp; Programme delivery, training provision, assurance, quantitative analysis and leading large scale risk improvement programmes. My current role is as the QinetiQ Group Project &amp; Programme Risk Manager, where I am responsible for all aspects of Project &amp; Programme Risk Management and ensuring that it dovetails into the wider Enterprise risk picture.</p>	<p>to grow the value that we offer our businesses and their decision makers.</p>	<p>have experience in other Project Controls disciplines such as scheduling and EVM. I believe this diversity gives me a well-rounded view to help support the development of Risk Management in a cohesive manner and bringing a diverse range of ideas to the table. I believe in keeping things simple and focusing on the value that risk management activities can add. I feel this makes my input both pragmatic and practical which I believe will help support development of future SIG outputs.</p>
Nathan	Gaskin	<p>I work on the flagship NPL commercial programme "The National Timing Centre" where I have owned the risk management process. I have used knowledge I have gained from the APM Foundation, Prince2 Foundation &amp; Practitioner and Novarae Consulting Risk Management Masterclasses. There are many issues that come up with risk management from when bridging the gap between practice and theory. I can challenge our current understanding and contribute ideas to developing a more useful tool and body of knowledge.</p>	<p>I need a tool and course that bridges that gap well enough so that those who 'understand risk management' are all able to study from the same experience. I would like to shape how we look at risk management together in the future.</p>	<p>I will challenge ideas, support ideas and review produced documentation so that we send out a good final product.</p>

Sara	Hasani	I have a PhD in risk and have been teaching risk management in projects for 11 years. I have also been involved in the updating of 3 chapters of PRAM framework.	I am currently a member of the committee and would like to continue the work we have started.	I have had a decade of Industry experience in managing industrial projects, before moving to academia to teach risk. I am an agile practitioner and lead on European research and education projects at the moment.
Andrew	Howard	I've 10 years of experience in roles requiring hands on application of project management, ranging from delivery of internal research & development projects to delivery of complex subsea control systems within the oil and gas industry and submarine weapons handling systems within the defence industry. These scopes have ranged from £500k to £100m+ and have all required application and management of risk as means of maximising the potential of success. I've also ~5 years of experience within project management consultancy, leading teams to undertake detailed quantitative risk analysis to inform strategic decision making of large capital programmes within the UK MoD, to developing and delivering risk management training and support. In the recent months I've joined a firm whose focus is on providing support to large capital programmes requiring recovery help and strategic analysis to	I'm looking for ways to get more involved with the APM and to find ways to give something back to the project management community. I like the idea of bringing together the experience and skills I've developed over the years and helping shape the development of best practices and methodologies that can potentially be taught to and used by the wider community. Whilst I consider myself a rounded project manager at heart, and therefore interested in all related competences, admittedly the concept of risk and how to manage it has become a particular interest from early in my career when I was exposed to the theory, benefits and application of risk analysis. Opportunities to support the SIG's have therefore jumped out as a great way to get involved, with the bonus it would provide an environment to grow my network and further develop the critical competencies needed to deliver projects.	Due to the varied nature of my career, which I hope to continue in my current role, I'll be able to bring a variety of experiences and insights to the SIG – ranging from a detailed understanding of quantitative risk analysis and potential benefits in achieving intelligent risk management, having hands of experience of applying and managing risks on large complex scopes of work across a number of industries to developing and delivering training and support in risk management in a consultancy environment. I consider myself to be a positive, approachable, motivated and enthusiastic Chartered Project Professional. I've mentored and developed career paths with individuals and work collaboratively with personalities at experience levels ranging from graduate to MD. I'm looking to take on a level of responsibility and become an

		get back on track, minimise cost and maximise benefits – approach to risk being a key.		involved, active member of the committee and one that is keen to help develop and push related initiatives forward.
Paul	Lane	Over the last 10 years I have held Operations Director roles, responsible for both operational and consultancy design frameworks/projects. As a Business Change Director I have been responsible for transition and integration projects all of which allows me to bring different perspectives to the Project Management Profession	After achieving my ChPP I have worked internally to mentor PMQ and ChPP candidates. At the start of 2021 I was appointed course leader for our ChPP Cohort, supporting and guiding 36 candidates and 16 mentors. I would now like to extend my support of Project Management as a profession to AMP and would welcome the opportunity to work on a SIG.	As a Business Change Director and UK Head of Business Continuity (includes Strategic Risk Management) I believe my perspective on internal and external risk management that can affect Project Delivery would bring benefit to SIG discussions and debates
Tony	McDonald	I have been part of the risk management profession for over 20 years after a career in the Royal Navy, fulfilling a wide range of risk leadership roles on a variety of projects and programmes. During this time, I spent 5 years as the Head of Risk for a £30bn+ submarine replacement megaproject, leading a team of 15. In recent years, I delivered a 12 month risk improvement programme for a major defence aerospace business and extended my industry experience into oil & gas, civil nuclear and rail, amongst others. Currently, I am the PMO Risk Manager for a major defence infrastructure improvement programme in the South West of England.	I have been a member of the SIG for some years but the last year has really reinvigorated my desire to contribute back to the risk management community. Its role is more important than ever in the current and then post-pandemic world. Being able to drive progressive thinking, bringing together risk and wider project professionals is vital and I want to contribute through the SIG committee to achieve this.	I have served as the SIG Committee Secretary for the past year, supporting the Chair’s drive to reinvigorate the SIG and its work. I have a very evangelical approach to risk management and am always keen to support any activity that spreads awareness and good practice. I have delivered SIG webinars, assisted in the planning/delivery of conferences and represented the SIG at wider APM events.

**APM Risk SIG**

**Supporting statement from nomination process of the elected committee members 2021/22**

Peter	Simon	I have worked in and around risk management for over 35 years.	I am the current Chair of the SIG and would like to continue my involvement.	I am very experienced in the way APM works having been involved with APM for many years. I am well known in the risk sector.
Robert	Webb	I have been a Risk SIG member for a number of years and wish to continue my involvement with the community	Desire to continue to engage	Project RM experience in managing, developing, deploying, training, and evaluating programme performance
